

What is claimed is:

1. A semiconductor device for output interface having an interface function with an output device, the semiconductor
5 device comprising:

an input terminal to which compressed data is input;
a decompression section which decompresses the compressed

data; and

an output terminal for outputting data decompressed by
10 the decompression section to the output device.

2. A semiconductor device for input interface having an interface function with an input device, the semiconductor device comprising:

15 an input terminal to which uncompressed data is input from the input device;

a compression section which compresses the uncompressed data; and

an output terminal for outputting data compressed by the
20 compression section.

3. A semiconductor device for driving a display section, the semiconductor device comprising:

an input terminal to which compressed data is input;

25 a decompression section which decompresses the compressed data; and

an output terminal for outputting data decompressed by

the decompression section to the display section.

4. The semiconductor device according to claim 1,
wherein the compressed data input to the input terminal
5 is compressed data demultiplexed from multiplexed data which
is multiplexed one or more types of compressed data, and
wherein the decompression section decompresses the
demultiplexed and compressed data.

10 5. The semiconductor device according to claim 2,
wherein the compressed data output from the output
terminal is multiplexed together with one or more types of
compressed data.

15 6. The semiconductor device according to claim 3,
wherein the compressed data input to the input terminal
is compressed data demultiplexed from multiplexed data which
is multiplexed one or more types of compressed data, and
wherein the decompression section decompresses the
20 demultiplexed and compressed data.

7. The semiconductor device according to claim 1,
wherein the compressed data is compressed according to
a given compression standard.

25 8. The semiconductor device according to claim 2,
wherein the compressed data is compressed according to

a given compression standard.

9. The semiconductor device according to claim 3,
wherein the compressed data is compressed according to

5 a given compression standard.

10. The semiconductor device according to claim 4,
wherein the compressed data is compressed according to
a given compression standard.

10 11. The semiconductor device according to claim 5,
wherein the compressed data is compressed according to
a given compression standard.

15 12. The semiconductor device according to claim 6,
wherein the compressed data is compressed according to
a given compression standard.

20 13. The semiconductor device according to claim 7,
wherein the given compression standard is an MPEG
standard.

14. The semiconductor device according to claim 8,
wherein the given compression standard is an MPEG

25 standard.

15. The semiconductor device according to claim 9,

wherein the given compression standard is an MPEG standard.

16. Electronic equipment comprising:

5 the semiconductor device according to claim 1; and
a demultiplexing section which demultiplexes compressed data corresponding to the semiconductor device from multiplexed data which is multiplexed one or more types of compressed data, and supplies the demultiplexed and compressed data to the
10 semiconductor device.

17. Electronic equipment comprising:

the semiconductor device according to claim 2; and
a multiplexing section which generates multiplexed data
15 by multiplexing one or more types of compressed data including compressed data supplied from the semiconductor device.

18. Electronic equipment comprising:

the semiconductor device according to claim 3;
20 a demultiplexing section which demultiplexes compressed data corresponding to the semiconductor device from multiplexed data which is multiplexed one or more types of compressed data, and supplies the demultiplexed and compressed data to the semiconductor device; and
25 a display section which is driven by the semiconductor device.

19. The electronic equipment according to claim 16,
further comprising:

a circuit which transmits and receives the multiplexed
data through a given communication network.

5

20. The electronic equipment according to claim 17,
further comprising:

a circuit which transmits and receives the multiplexed
data through a given communication network.

10

21. The electronic equipment according to claim 18,
further comprising:

a circuit which transmits and receives the multiplexed
data through a given communication network.
